

Tre neuroni

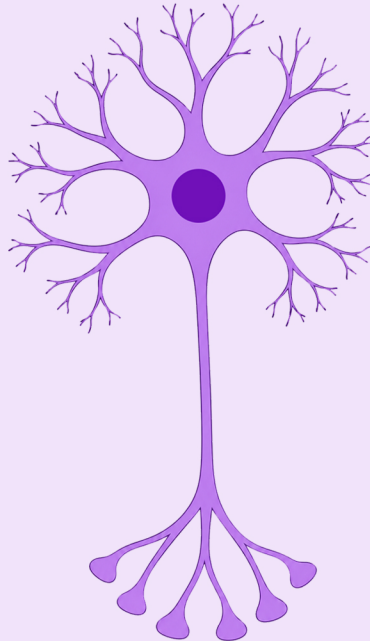

una sola squadra !

Neurone Sensoriale

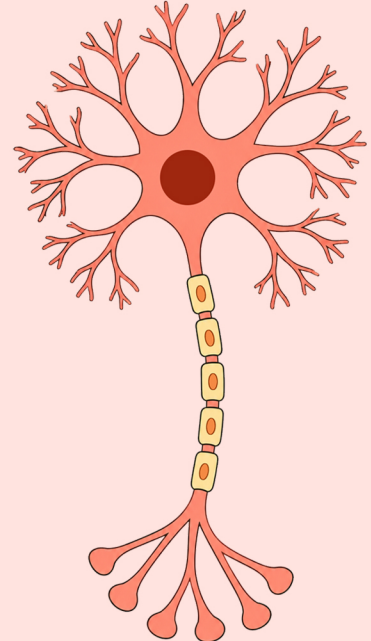

Raccoglie informazioni
dal corpo e le porta al
sistema nervoso centrale

Interneurone

Collega
i neuroni sensoriali con
i neuroni motori

Neurone Motore

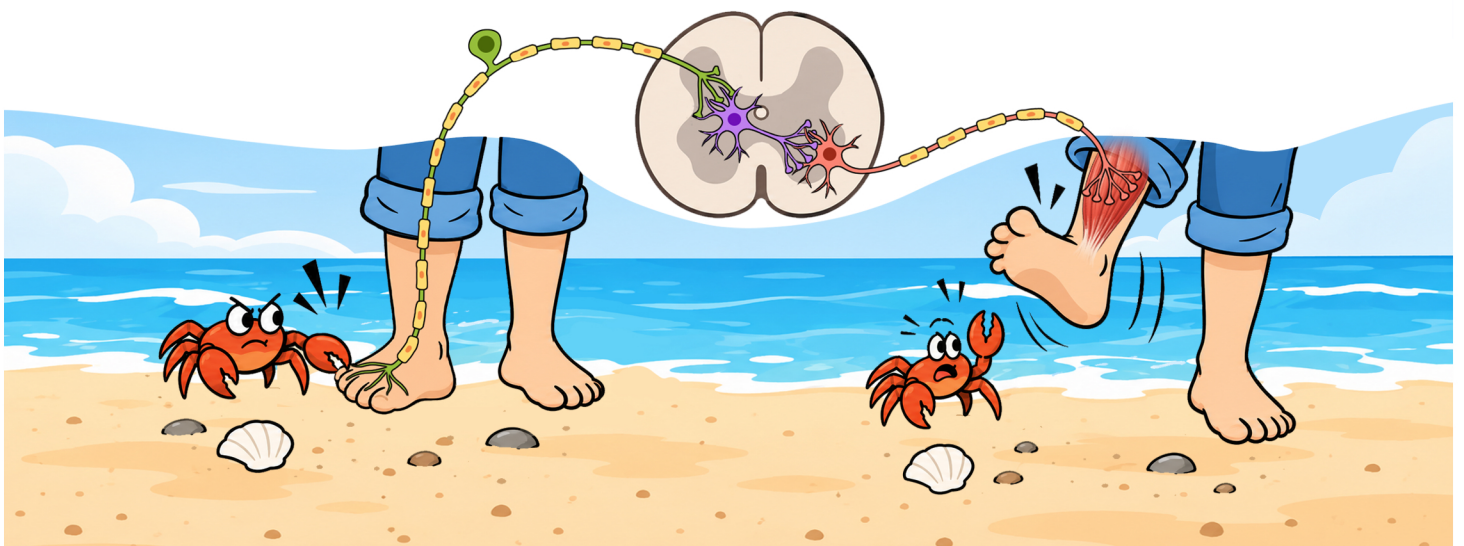

Porta i comandi
dal sistema nervoso
centrale ai muscoli.

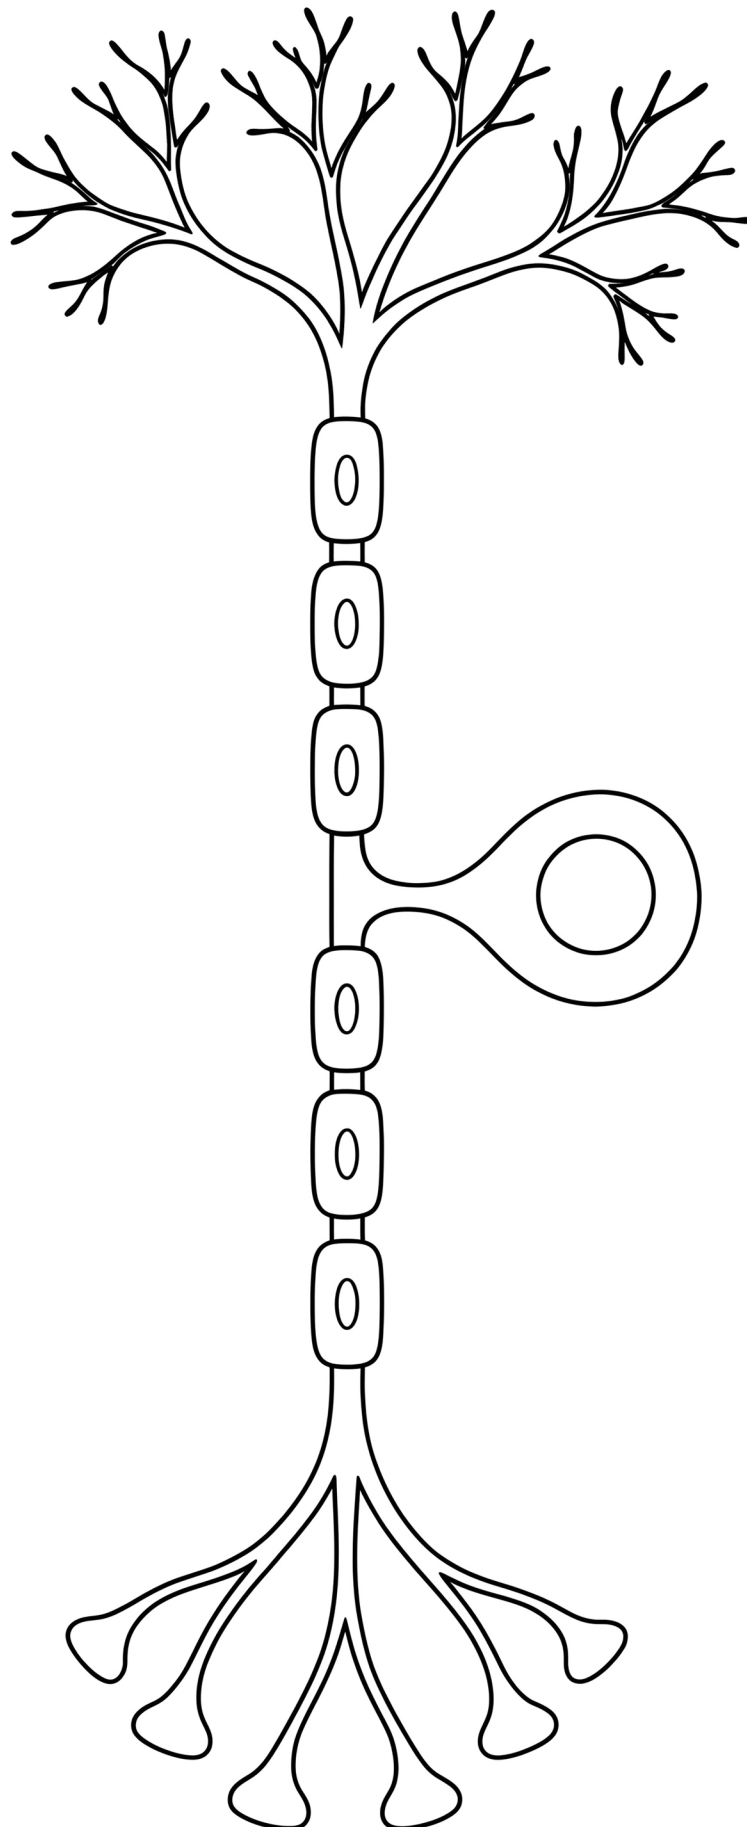

Lavorano insieme!

Il **neurone sensoriale** porta l'informazione al midollo.

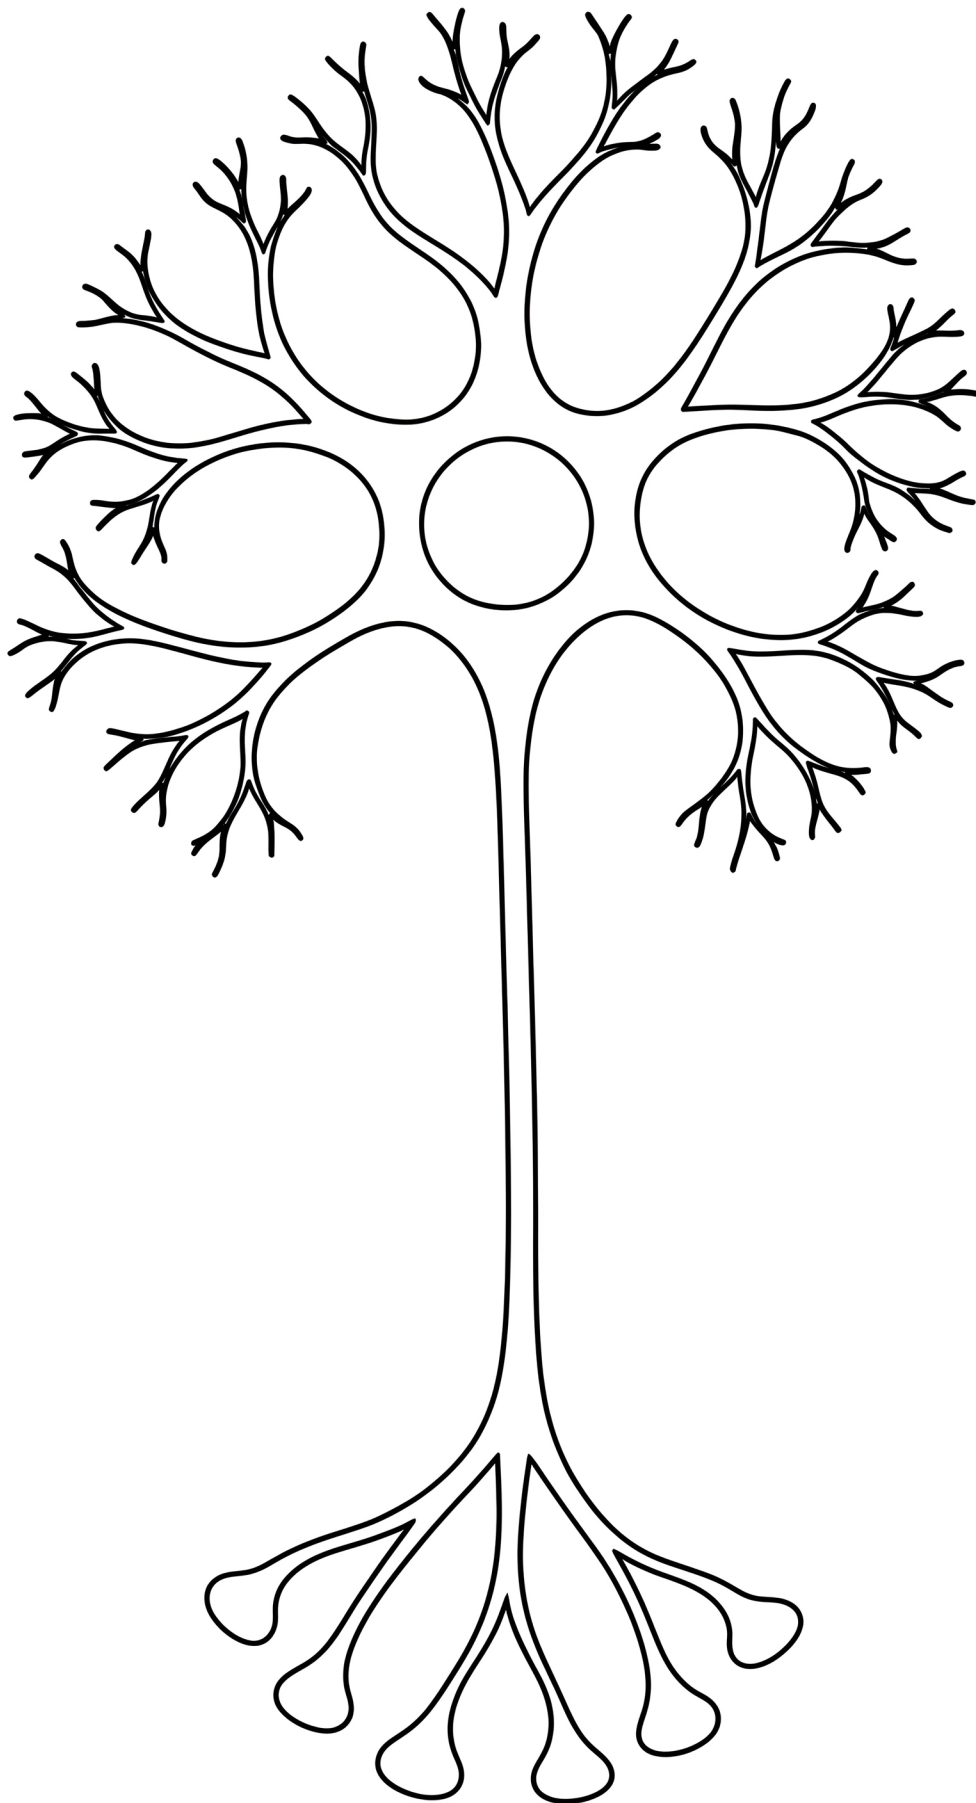

L'**interneurone** la passa al **neurone motore**, che attiva i muscoli.

Neurone sensoriale

Interneurone

Neurone motore
